Directions

Ingredients

Transplanting Gel Ingredients: Water, Beeswax (Natural Propolis), Carnauba (Brazilian palm glue), Iron Oxide CI 77499 (Black), Collagen, Acrylates Copolymer, Nylon, Stearic Acid, Propylene Glycol. .23 FL OZ / 7 ml

Natural Fibers Ingredients: 100% Natural Fibers taken from Green Tea. Net WT .02 OZ / .5g.

Collagen is a type of protein that works with elastin to give skin its texture, structure, and appearance. It contains antioxidants, and may help add volume and shine to the appearance of eyelashes.

Water (Aqua) is the liquid of life! Hydrates and cleanses the skin, and works as a natural spreading component, helping to distribute other ingredients evenly over the skin.

Beeswax (Natural Propolis) is a brownish, resinous material collected by bees and believed to have antibacterial and anti-inflammatory properties.

Carnauba (Brazilian Palm Glue) is extracted and refined through a pressing and crushing process that turns the palm glue into an oil, creating the sticky nature of the transplanting gel. It is also believed to act as a natural preservative.

Iron Oxide CI 77499 (Black) is a technical name for Black Iron Oxide. This naturally-occurring mineral acts a colorant, giving the gel its striking black color.

Acrylates Copolymer is an adhesive and binder, as well as a suspending agent.

Nylon is a powder substance that is used as an absorbent and thickening agent.
